

# Learn to code FREE courses at your school

NSW only

## CODE WITH ALTINO

With Altino the Robot Car, and an innovative hybrid education model, your students learn to do basic coding with sensors - with Australia's most sophisticated autonomous robot car.

Students will see with their own eyes, how their new skills program the robot's movement, steering, lights, sound and LED matrix and display pixel art.

**How?** The school registers for the programme. Parents can then book online to enrol their child. The course includes 1 hour of classroom teaching + 1 week of at-home interactive learning with Altino the Robot Car. Parents register using their \$100 Creative Kids Voucher from the NSW Government for their children to participate for free. (Or cost is \$100)
